MORNINGSTAR® ★★★★★

5 Star Morningstar Rating for Direxion Indexed Commodity Strategy Fund, which tracks ABCERI

AUSPICE **BROAD COMMODITY INDEX**

COMMENTARY + STRATEGY FACTS

OCTOBER 2017

SUMMARY

Commodity benchmarks were stronger with most significant contributions from Petroleum and Industrial Metals. Globally, oil has been trending higher with WTI comfortably above $50 and Brent ending the month above $60. As such, the energy tilted GSCI gained 3.72% while the more diverse Bloomberg Commodity Index gained 2.05%.

October was another very strong month for global Stock markets: the S&P gained 2.22% while the MSCI World added 1.81% for reference. Gains on the resource tilted Canadian TSX/S&P60 also gathered strength adding 2.75% to make new all time historical highs.

Interest Rate futures and debt continued to soften in October as confidence builds that the US FED will continue to raise rates while the US Dollar continued to rally vis-à-vis most currencies softening.

Auspice Broad Commodity gained 1.74% in line with the benchmark long commodity index performance for the month. See Table 1.

OUTLOOK

While momentum appears to be slowly building in commodities overall, the tactical approach continues to hold value as not all commodities rally at the same time. For example, Grains were weak in some markets yet stronger in others. Within Metals, the same disparity existed in Industrial versus Precious metals.

This approach is why on a 3 year basis the ABCERI has limited the downside in challenging commodities environment while on a 10 year basis this performance significantly outstrips the commodity benchmarks with far less volatility.

See Chart to right: From a quantitative perspective, commodities are near the bottom of the statistical distribution of returns while equities remain near the top. The ratio of commodity to equity is at the bottom of the historical range as illustrated, leading to a long term opportunity given the cycle is typically long.

AUSPICE

ATTRIBUTIONS AND TRADES

There was a single change in the commodity portfolio in October with WTI Crude Oil added late in the month.

The portfolio is now long 5 of 12 commodity components (or 42%) and includes 2 of 3 sectors, Metals and Energies (see Chart 3).

Performance was positive in 2 sub-sectors of the index (see Chart 2) while there remains no exposure across the diverse Ag markets.

The top performing components were Heating Oil, Gasoline and Copper while the biggest drag was Gold.

SECTOR HIGHLIGHTS

ENERGY

The energy sector had a great month on the back of long petroleum exposures. WTI Crude was added to existing positions in Gasoline and Heating Oil while the portfolio remains comfortably on the sidelines in Natural Gas which fell over 8% on the month.

METALS

While Gold softened, the loss was offset by the rally in Copper for a sector gain. The Industrial sector remains strong while Precious metals are more disparate. The strategy remains without exposure in Silver.

AGRICULTURE

Grains softened led by Wheat and Corns while Soybeans showed some upside strength. In Softs, Cotton continued to slide lower while Sugar found a bottom and moved higher. The portfolio remains without an exposure in this sector.

COMMENTARY + STRATEGY FACTS

OCTOBER 2017

WHY AUSPICE INDICES

The Auspice Indices are designed to meet the needs of investors that are looking to participate in liquid alternatives through a disciplined approach without sacrificing performance, diversification, and transparency. We believe Auspice Indices encompass everything from alpha to beta, across a return continuum. The indices blend elements of active management and indexing into a transparent, published, single strategy rules-based approach.

STRATEGY DESCRIPTION

The Auspice Broad Commodity Index aims to capture upward trends in the commodity markets while minimizing risk during downtrends.

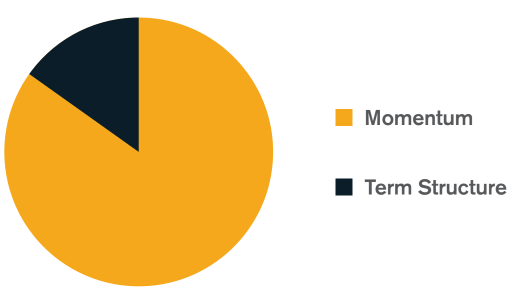
The index is tactical long strategy that focuses on Momentum and Term Structure to track either long or flat positions in a diversified portfolio of commodity futures which cover the energy, metal, and agricultural sectors. The index incorporates dynamic risk management and contract rolling methods. The index is available in total return (collateralized) and excess return (non-collateralized) versions.

THE MAIN POINTS OF DIFFERENTIATION INCLUDE:

Auspice Broad Commodity combines tactical commodity exposure with capital preservation. We believe that traditional passive long-only commodity indices do not provide investors with an optimal long term investment solution.

- Seeks to capture upward trends in the commodity markets while minimizing risk during downtrends
- Tactical exposure to a diversified basket of commodities that can individually position long or flat (no position)
- Rules-based quantitative methodology combined with dynamic risk management and contract roll optimization to deliver superior returns

RETURN DRIVERS



AUSPICE BROAD COMMODITY INDEX
Long / Flat Approach
Positions can be changed on an intra-month bases
Accounts for Short-term Price Trends
Practices a Smart Roll-Yield to minimize impact of contango and backwardation
Broadly diversified (when exposed) and less concentrated in any one commodity sector
Rebalanced monthly based on volatility of each underlying commodity

LONG-ONLY COMMODITY INDICES
Long-Only Approach
Positions are always 100% long
Doesn't take into account downward price trends
Contracts typically roll into next contract month
Poorly diversified amongst single sectors
Most rebalance annually based on predetermined weightings for commodity sector

OTHER DETAILS

COMPARABLE INDICES

*Returns for **Auspice Broad Commodity Excess Return Index (ABCERI)** represent returns calculated and published by the NYSE. The index does not have commissions, management/incentive fees, or operating expenses.

The Bloomberg Commodity (Excess Return) Index **(BCOM ER)**, is a broadly diversified index that allows investors to track 19 commodity futures through a single, simple measure.

The **S&P/TSX 60 Index** is designed to represent leading companies in leading industries. Its 60 stocks make it ideal for coverage of companies with large market capitalizations and a cost-efficient way to achieve Canadian equity exposure. Price Return data is used (not including dividends).

The **S&P 500** is an index of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large cap universe. Price Return data is used (not including dividends).

The **(MSCI) World Index**, Morgan Stanley Capital International, is designed to measure equity market performance large and mid-cap equity performance across 23 developed markets countries, covering approximately 85% of the free float-adjusted market capitalization in each. This index offers a broad global equity benchmark, without emerging markets exposure.

Excess Return (ER) Indexes do not include collateral return.

The S&P Goldman Sachs Commodity Excess Return Index **(S&P GSCI ER)**, is a composite index of commodity sector returns representing an unleveraged, long-only investment in commodity futures that is broadly diversified across the spectrum of commodities.

The **SG CTA Index** provides the market with a reliable daily performance benchmark of major commodity trading advisors (CTAs). The SG CTA Index calculates the daily rate of return for a pool of CTAs selected from the larger managers that are open to new investment.

The **Barclay BTOP50 CTA Index** seeks to replicate the overall composition of the managed futures industry with regard to trading style and overall market exposure. The BTOP50 employs a top-down approach in selecting its constituents. The largest investable trading advisor programs, as measured by assets under management, are selected for inclusion in the BTOP50.

PERFORMANCE NOTES

The Equity benchmarks used in this material are intended to reflect the general equity market performance. They are shown to illustrate the non-correlated attributes versus other assets. Adding non-correlated assets within a portfolio has the potential to reduce portfolio volatility and drawdowns.

The performance of Auspice Broad Commodity Index prior to 9/30/2010 is simulated and hypothetical as published by the NYSE. All performance data for all indices assumes the reinvestment of all distributions. To the extent information for the index for the period prior to its initial calculation date is made available, any such information will be simulated (i.e., calculations of how the index might have performed during that time period if the index had existed). Any comparisons, assertions and conclusions regarding the performance of the index during the time period prior to the initial calculation date will be based on back-testing.

These results are based on simulated or hypothetical performance results that have certain inherent limitations. Unlike the results shown in an actual performance record, these results do not represent actual trading. Also, because these trades have not actually been executed, these results may have under-or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated or hypothetical trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to these being shown. The index does not have commissions, management/incentive fees, or operating expenses.
